

Barangay Cawitan: A Web-Based Complaints Management System

System Overview

Barangay Cawitan: A Web-Based Complaints Management System is a Django and MySQL web application designed to help barangay residents submit complaints online and allow barangay personnel to monitor, assign, update, and resolve those complaints through role-based dashboards.

- Residents can register, log in, submit complaints, upload supporting evidence, and track complaint status.
- Barangay admins can monitor all complaints, manage resident and staff accounts, assign complaints, and view reports.
- Barangay staff can view complaints assigned to them, update progress, add remarks, and mark cases as resolved or rejected.
- The system sends resident notifications when complaint status changes, improving transparency and follow-up.

Technology Stack

Python, Django, MySQL, HTML, CSS, JavaScript, Bootstrap 5

System Overview

Main Users

- Resident - submits complaints and monitors complaint progress.
- Barangay Staff - handles assigned complaints and records updates or remarks.
- Admin - manages users, complaints, assignments, dashboard statistics, and reports.

Core Complaint Data

- Category, title, description, incident location, incident date, resident account, assigned staff, current status, evidence files, and response remarks.

Complaint Status Flow

- Pending -> Under Review -> In Progress -> Resolved or Rejected.
- Each update can include staff/admin remarks and may notify the resident.

Expected Benefits

- Provides a centralized complaint record for Barangay Cawitan.
- Reduces manual tracking and makes complaint follow-up easier for both residents and barangay personnel.
- Improves accountability by showing assignments, status history, and reports.
